

We travel extensively. We purchase satellite radio specifically for the purpose of having a service that we could depend on for information and entertainment no matter where on the US mainland we are. With satellite radio, being able to stay tuned to up-to-the-minute travel and weather information has proven invaluable to us. Without satellite radio, fumbling around with the regular radio trying to find local information, proved to be both frustrating and, in some instances, dangerous when travelling along the roadways.

It makes absolutely no sense to limit our access to information and entertainment via a service that we are willing to paying for.

Please reject the NAB's petition 04-160. Allow us to continue receiving the kind of programming that we demand and deserve.

Thank you.
